

## Overview:

The following document contains the bugs results via testing and some suggestions or improvements in the provided frontend.

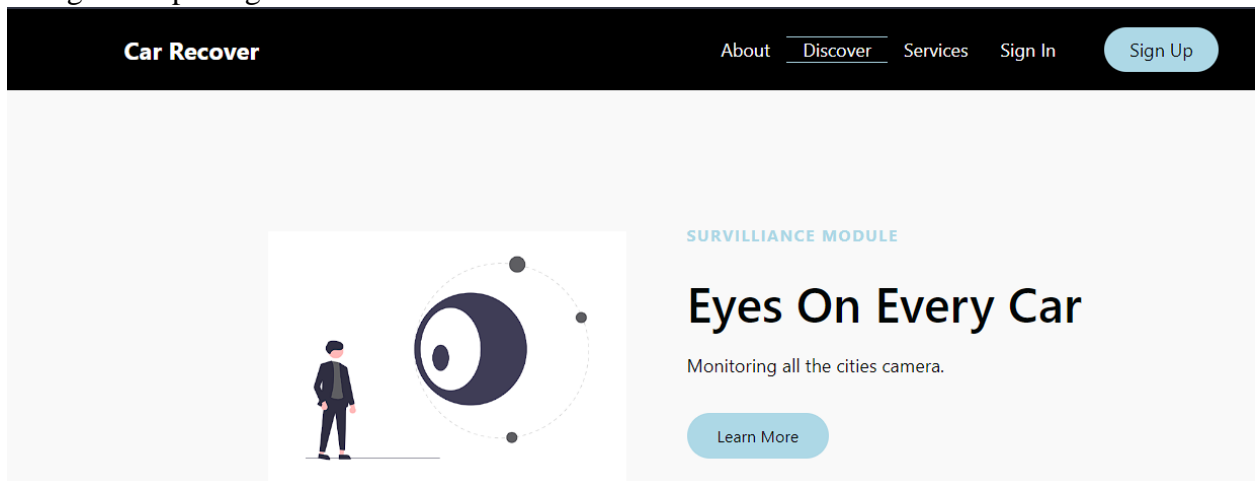

## Bugs:

Following are the list of bugs.

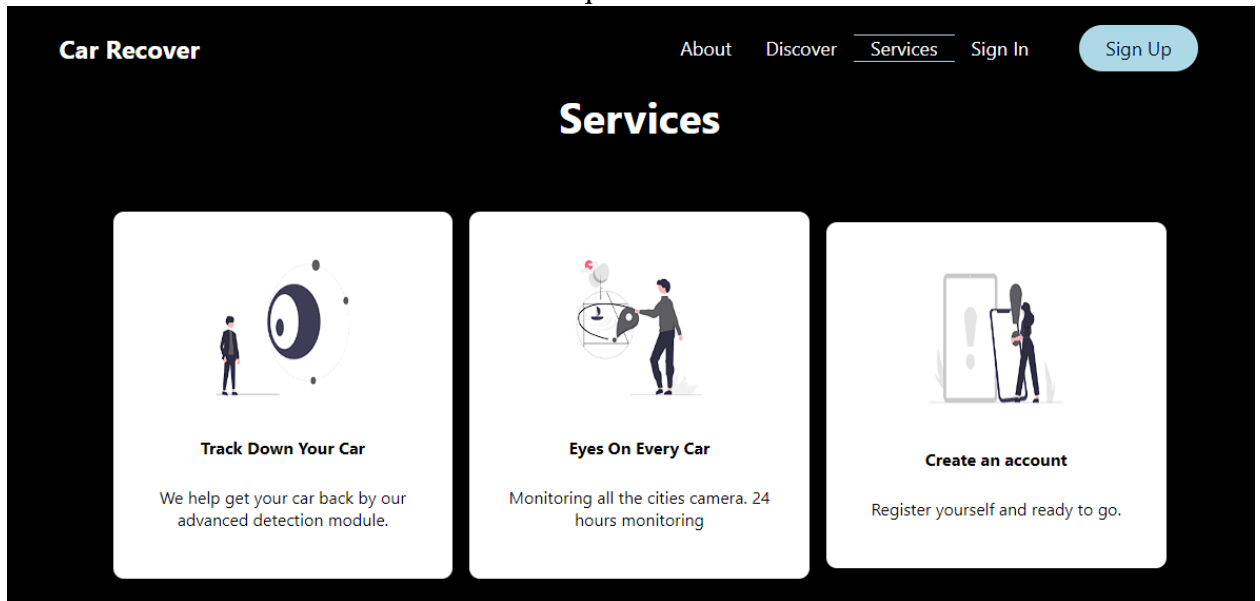

- 1) The get started button on about section is unclickable.

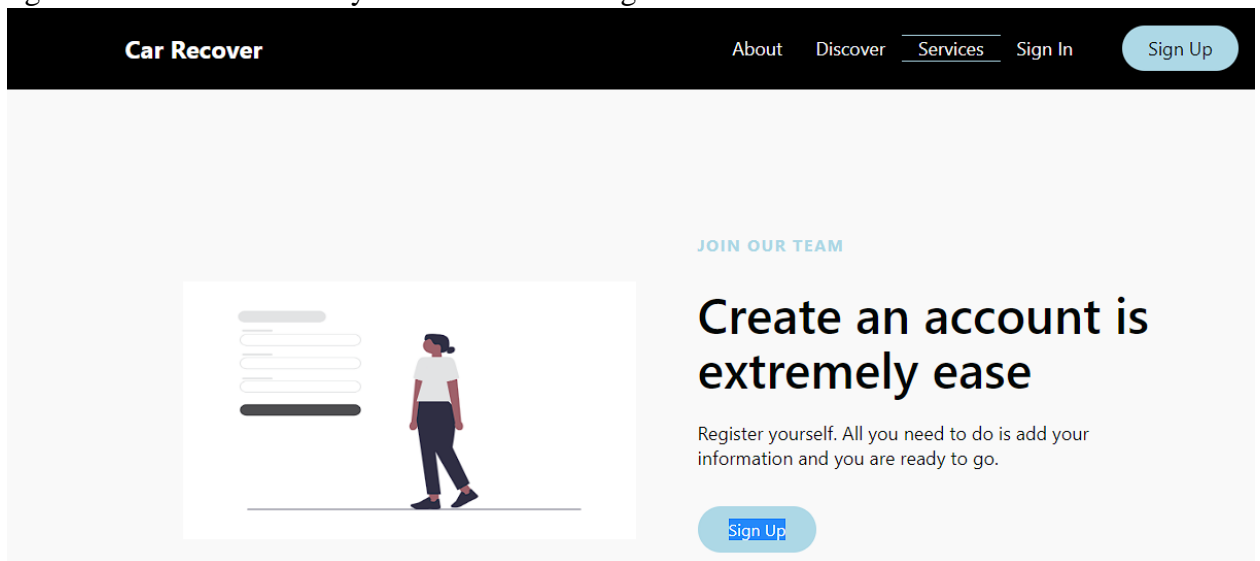

- 2) The learn more button is unclickable and the colour of Surveillance module should be change and spelling should be corrected to Surveillance Module.

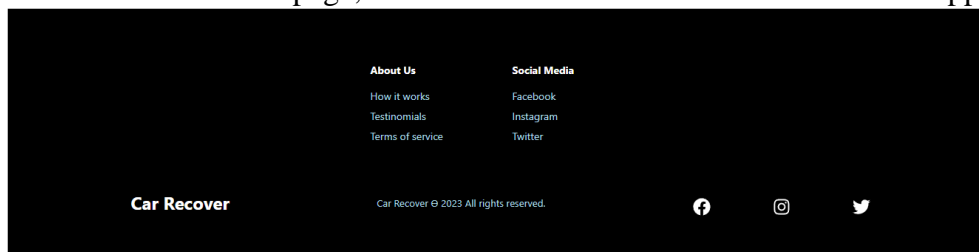

- 3) The cards are unclickable and sizes are not equal.

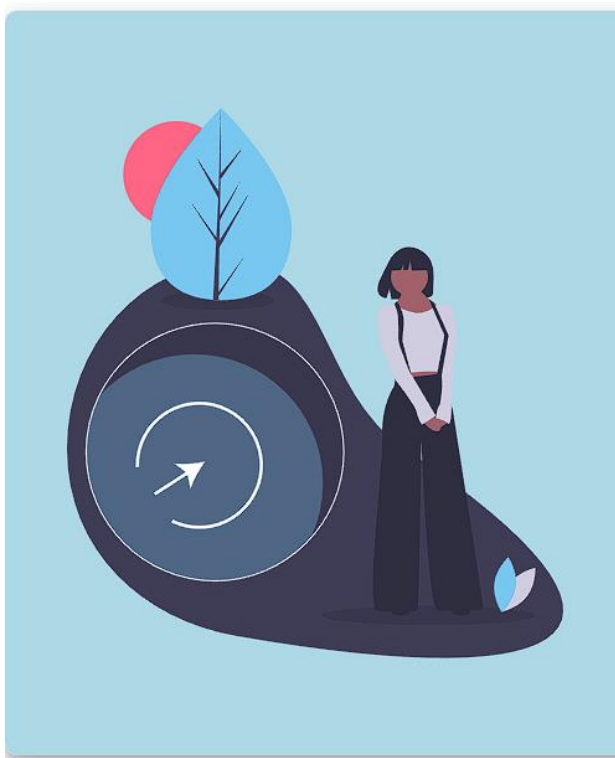

- 4) The Sign Up button is unclickable and Join our Team theme should be change, it is too light. The text “is extremely ease” must be change.

- 5) The footer should be corrected. The alignment of Car Recover must be adjusted, The texts are unclickable, the logos of fb, Instagram and twitter is clickable but redirected a user to the start of the page, it should be removed or redirected a user to appropriate page.

- 6) There should be corrected dummy name texts in the field for the user. For example, it is accepting sign up request on “Hassaan Ahsan” but according to the depiction it should consider a (.) between first and last name not and space ( ).

- 7) There are many errors in the login screen, both showing login as admin plus it is redirecting to admin page even with the wrong credentials.

**Login as admin**

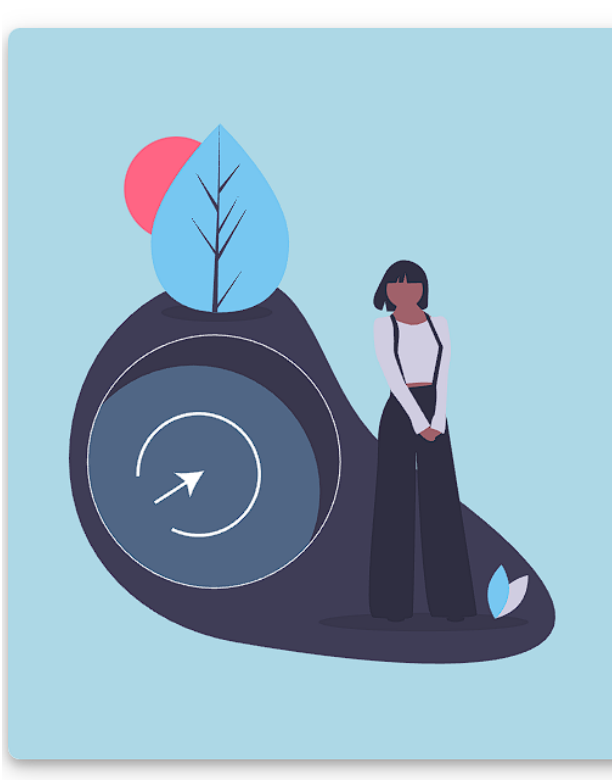

Admin ID  
has

Admin ID  
Enter password

**Login**

LoginAdmin

8) It is accepting the sign up request on this data:

Email validation should be improved. There should be password acceptance criteria which must consist of upper case, lower case, special characters and numbers which is missing.

### **Suggestions/Improvements:**

1. There should be change in colour from dim blue to darker colour in different texts and for sign up button.
2. There should be improvement in sign up button styling.
3. There must be a logo for the platform.
4. Other important suggestions and improvements are mentioned in the bus section.
5. Login module needs much changes in terms of texts and flow of program with front end validation.
6. The java script pop up of errors in email validation should be switched with the actual error message on the front end.
